

Third-Party Resources Used

Dinil Thilakarathne

September 15, 2024

1 Introduction

In this document, we provide a comprehensive list of third-party resources used in the development of the project. This includes libraries, frameworks, tools, and any other external resources integrated into the project. Our goal is to maintain transparency and give credit to all contributors.

2 Frameworks

- **Next.js:** A React framework used for server-side rendering and static site generation.
- **Tailwind CSS:** A utility-first CSS framework used for styling and creating responsive designs.

3 Libraries

- **Framer Motion:** A library used for creating animations in React applications.
- **Lucide React Icons:** A set of icons used for social media links and other UI elements.

4 Tools

- **Vercel:** The platform used for deploying the Next.js application.
- **GitHub:** Used for version control and code repository management.

5 Fonts and Assets

- **Google Fonts:** Used for web fonts to enhance typography.

6 Code Usage

- **Motion Primitives:** Code from the Motion Primitives library was used to implement the FAQ section accordion. The accordion functionality was based on their implementation, which can be found at <https://motion-primitives.com/docs/accordion>.

7 Acknowledgments

We acknowledge the creators and maintainers of the third-party resources listed above. Their work has significantly contributed to the development and functionality of this project.

8 Conclusion

Transparency about the tools and resources used in our project is crucial for giving proper credit and maintaining integrity. We appreciate the efforts of all third-party contributors who have made this project possible.
